An a-box is a box of negative type

Then the sum of Zeroes is a Zero whose t

product of the types of the constituents.

Product of types

$\times$	$\oplus$	$\ominus$
$\oplus$	$\oplus$	$\ominus$
$\ominus$	$\ominus$	$\oplus$

Ex. $\square + \square + \square + \square + \square + \square = \square$

Types: $\oplus \quad \oplus \quad \ominus \quad \oplus \quad \ominus \quad \ominus = \ominus$
