Recursive def'n of Boxes

(1) zero ($\boxed{}$) and a-zero ($\boxed{}$)
Boxes

(2) If $X, Y, \dots Z$ are Boxes, then so are

$$\underbrace{A = \boxed{X \; Y \dots Z}}_{\text{box}} \quad \text{and} \quad \underbrace{A^a = \boxed{X \; Y \dots Z}}_{\text{a-box}}$$

In this case $X, Y, \dots, Z$ are the elements of the Boxes A or A^a.
