

A man with white hair, wearing a red button-down shirt, is speaking directly to the camera. He is in a room with a white wall. Behind him to the left is a black television set. To his right, a blue lamp is visible. On the far left, a portion of a window with a decorative frame is visible. The man's mouth is open as if he is in the middle of a sentence.

Recursive def'n of Boxes

- ① zero () and a-zero () are both Boxes

- ② If $X, Y, \dots, Z$ are Boxes, then so are

$A = \boxed{X \ Y \dots Z}$
/ box

and $A^q = \boxed{x \ y \dots z}$
| a-box
