

odd number of a-boxes, then the result is

Recursive def'n of Boxes

① zero ($\square$) and a-zero ($\square$) are both Boxes

② If $X, Y, \dots, Z$ are Boxes, then so are

$$A = \boxed{X \ Y \ \dots \ Z} \quad \text{and} \quad A^a = \boxed{X \ Y \ \dots \ Z}$$

box a-box

In this case $\forall \dots \exists \dots$ are the elements of
