

Ex

$$3 = \boxed{\square \square \square}$$

$$3^a = \boxed{\square \square \square}$$

$$\bar{3} = -3 = \boxed{\square \square \square}$$

$$\bar{3}^a = \boxed{\square \square \square}$$

Addition of Boxes

To add Boxes, we form a new Box whose elements are all the elements of the original Boxes, and whose type is the product of the types of the original Boxes
