

Academic Career timeline of a Determined Mind

- **1949** Begins studying theoretical physics at the University of Göttingen. Attends lectures by Pascual Jordan, Max Born and Werner Heisenberg.
- **1952** Initiates formal development of a unified field theory, presents preliminary work at scientific meetings. The concept of the *Metron* a quantized surface element is already present. Heim wishes to submit this work as a doctoral dissertation, but no professor agrees to supervise the project.
- **1954** Completes his Hauptdiplom in theoretical physics. During his oral exam in tensor calculus delivered entirely by dictation an examiner remarks *He owns the equations better than we can read them.*

In the garden with his father summer 1949
