

Philosophical Depth in Heim Theory — Resonance and Boundary

Philosophical Resonances

- **Hedwig Conrad-Martius** – *Realontologie*, stratified being:
 - Heim's ontological zones reflect her *Stoffbasis*, *Wirkbasis*, and *Sinnbasis*.
- **Nicolai Hartmann** – modal ontology, emergent layers:
 - Heim's ontological zones reflect his *Grundgesetze der Metaphysik*.
- **Roman Ingarden** – ontic moments and potential being:
 - Heim's ontological zones reflect his *Philosophie der Erfahrung*.
- **A.N. Whitehead** – relational process metaphysics:
 - Heim's ontological zones reflect his *Process and Reality*.

Clarification (Epistemic Boundary)

- Heim's model is not idealist or phenomenological — modal zones are not constructs of the mind.
- Heim maintains objective realism: selector logic is a structural precondition of field realization — not a psychological condition.
- This protects Heim Theory from subjective or relativist misuse.
