

do same for 6 instead of 7,
 $\{2, 3, 4, 5\} \pmod{6}$ is a ring, but

This ring has zero divisors

$$2 \times 3 = 0$$

or to id:

$$(a + b\sqrt{2})^2 = 2$$

$$-4 + 13\sqrt{2}$$

Vector space V over a field F

objects called vectors $\vec{v}$

$$+; \vec{v} + \vec{w}$$

scalar mult'n. $3\vec{v}, -\frac{5}{2}\vec{v}$

$$\vec{v} = (a, b)$$

$$a, b \in F$$
