

# Kontrabarie: Field Cancellation in Modal Zones

**Formal Condition:**

$$T_{ik}^{(\mu)} + \Theta_{ik} = -g_{ik}^{\text{eff}}$$

where:

- $T_{ik}^{(\mu)}$ : polymetric field tension,
- $\Theta_{ik}$ : modal tension (from selector gradients),
- $g_{ik}^{\text{eff}}$ : effective inertial/gravitational curvature.

**If this condition holds, the region becomes inertially neutral:**

$$\Rightarrow m^{\text{eff}} = 0$$

**Interpretation:** In these zones, the modal geometry cancels curvature participation in spacetime — a literal *Kontrabarie*.
